

We are pleased to announce the 30th anniversary of International Logistics Systems, Inc. (ILS-INC). We proudly serve as full-service Integrated Logistics Support (ILS) specialists.

Our founder and president, Walter Grinnell, established ILS-INC in March of 1989 with a mission to provide professional and cost-effective engineering and logistics support services.

Leveraging over 21 years of service in the U.S. Army in addition to his experience working for defense industry contractors such as Martin Marietta and Bowen & McLaughlin York, Walter's vision for ILS-INC has been to "provide all the same quality services and on-time contract schedule deliveries at a lower cost than the larger companies."

To fulfill this goal, we have built a team of subject matter experts drawn from varying military, defense, and commercial backgrounds. With our combined experience, we have successfully won and completed contracts for a broad range of commercial and Government clients. Our government customers include the Department of Defense, Department of State, Department of Energy, and international government and defense allies.

Under these partnerships, we have delivered integrated product support and services such as management, technical manuals, training, provisioning, field support, supportability engineering, packaging, safety engineering, fielding and material management, and foreign military sales.

In reaching this 30-year milestone, we believe our success is the result of our dedicated employees as well as the many customers who have entrusted their business to us. We remain committed to offering the same high-quality support and knowledge our customers rely on.
